Dr. Meredith J. Sprunger
307 Plymouth Street
Culver, Indiana

Dear Dr. Sprunger:

Thank you so much for sending me the "Evaluation" and also "Religion for the New Age." I think you've done a wonderful job and I certainly hope you get it published. This is a very good approach and it can slip through the armor of some people who wouldn't take the book. I continue to be amazed at you. How can you do so many things--and do them so well! Your grasp of the book in such a short time is remarkable. You certainly have caught the spirit of it.

And I hope you won't mind my mentioning that a few of your facts aren't quite straight. In this article it won't matter as it's all being put forward as speculation. But for yourself and your students you might want to review Page 167, for example. The Milky Way is not our local universe of Nebadon, it is the entire 7th superuniverse, Orvonton. And the diameter of Orvonton is about 500,000 light years (not 40 million). See Pages 359 and 360 in Paper 32. I don't know where you got the figures at the top of Page 3, but if you can give me the pages, maybe we can get straightened out. Or perhaps you're not quoting from the book, but from some other source.

Let me say again that I think you've done a wonderful job. I hope this gets published.

Cordially,

Marian Rowley
Secretary-General

Marian Rowley
