Meredith:

I'm a little worried about getting mixed up with saucer people. As a rule, they're such fanatics and screwballs, though not all. I don't know where you stand on saucers, but because of my belief in the Urantia Book, I simply can't believe that humans from other worlds are visit~~ing~~ us. It isn't logical and I don't believe it would be permitted. You remember at the beginning of Paper 72 they say it is most unusual for one world to be permitted to know what is going on on another. And if humans visited back and forth imagine the mix-up in cultures and perhaps even in races! Also, although they do say that there are 3 other spheres in our solar system which might be suitable for life, they don't say there is life on them. They do say if Venus were inhabited, the people would be superbreathers, if Mars were inhabited, they would be sub-breathers, and if the moon, nonbreathers. But they don't say any of them are. We are mid-breathers. If any of those other kinds visited here, I don't see how they could exist in our atmosphere. They do say there are nonbreathers in close proximity, which might mean the moon, but I doubt it very much. Whatever the UFO are, I just can't believe they're human visitors. Does my stand make sense to you? This is just my personal opinion so I'm making it separate from my report.
