Urantia Brotherhood
533 Diversey Parkway
Chicago 14, Ill.

Attention: Miss Marian Rowley
Secretary General

Dear Miss Rowley:

May I ask you to intercede for me in regard to a letter sent to me on August 2, 1957, by your Mr. or Dr. Harold E. Karrer. I am a little ashamed to answer it at this point, but I guarantee you that there has been many reasons why I haven't. I will only say that immediately after you received my gravitational paper, I became so enthralled with the belief that it could be proven astrophysically that I stopped work and spent 2 months attempting to sell a research program. Even though I saw the top management of many of the Eastern seaboard aircraft and electronic firms, the stage of development that the Cosmology had reached was not sufficiently advanced and of course was doomed to failure.

I have not yet recouped financially, but my rewards in all other areas have been so great that the finances have become secondary. For over a year I worked with a good many medical friends to develop a hypothesis on the operation of the brain, which shows that the energy for thought processes does not come from the chemical breakdown of phosphate bonds in cytoplasm, but that it comes from the exterior of the human body. This is of course impossible by our present day scientific concepts, yet the medical research men in this area have not been able to prove I am wrong. When I rewrite this paper I will forward a copy for your files. However, this work is secondary to the research that I have been doing in the astrophysical field.

I have just now completed a graphical detail presentation of the first attempt of 2 years ago. I am now starting the write up, which will probably take me six months. I have been working with 2 astronomers, a cosmologist and a Dr. specializing in electro-magnetics. As things now stand I am not able to answer to their complete satisfaction all the astronomers questions, but the cosmologist and Dr. in electro-magnetics are satisfied, but even more important I have had several lengthy discussions with some of the pillars of the Catholic church and intergration of the Celestial Hosts with physical Architectural Spheres, verified and positioned in space by Radio Astronomy data has met with complete acceptance. I have been over this hypothesis with many other technical minds and lay personnel, and so far the acceptance has been quite universal. When my graphs are in final form I will send a copy, but they are still going through revision as I probe into data on galaxies in the outer space relms. Incidentally, the linear gravity concept now becomes understandable and appears to be the force charge responsible for the disc arrangement of the cosmos. I believe that I can now show that this force charge in terms of mathematical relationships, is LINEAR.

If I may change the subject, would you be good enough to tell me what type of doctor is Dr. Senior? Also, were you the person who transcribed the material as it was presented from the Celestial Hosts? I also understand that you were permitted to watch a seraphic departure on the shores of Lake Michigan. Would you care to give me any of the details on this event ?? Did you send certain of the papers from the 'Urantia Book,' to scientific minds, and if so were any of them Astrophysicists and physicists? Were they decent enough to give you any comments, or did they just consider your group to be another misfit organization in the world ?

May I hear from you at your convenience and I will try not to be such an inconsiderate creature in the future. I do appreciate Mr. H.E. Barrett's offer to present my interpretation and I have every reason to believe that it has been delayed for a purpose. May we have the opportunity to get together in the near future.

Best regards.

Sincerely,

A.A. Zachow
